

Oluwatosin Oseni

kingosenitosin@gmail.com | [linkedin.com/in/oluwatosin-oseni](https://www.linkedin.com/in/oluwatosin-oseni) | github.com/oseni99

Education

Talladega College

Bachelor of Science in Computer Science

GPA: 3.98

May 2027

Organizations: ColorStack, Google Developers Student Club, Plummer Cobbs Honor Program, Codepath, TMCF

Technical Skills

Languages: Python, Go, C++, JavaScript, TypeScript, Java, HTML/CSS, SQL

Developer Tools: Figma, Linux, Firebase, Supabase, AWS, Azure

Technologies/Frameworks: Django, React, Node.js, FastAPI, GraphQL, Docker, Flask, Express, LWC

Experience

Software Engineering Intern

Salesforce

San Francisco, CA

May 2026 – August 2026

- Shipped **internationalization (i18n) framework support** into the **Salesforce Platform SDK**, engineering a runtime engine that fetches translations over **GraphQL** and unifies a single source of truth across **Apex, LWC, and React**, solving a gap that previously left **React micro-frontends** unable to localize at all on the platform
- Authored the **official developer guide and reference application**, and built an **AI-powered Agentforce skill** that automates end-to-end app localization, establishing the standard now adopted into the team's internal and external engineering onboarding

Technical Program Manager Intern

Microsoft

Seattle, WA

May 2025 – August 2025

- Led the integration of **Model Context Protocol (MCP)** with **Azure Health Data Services (AHDS) FHIR server**, enabling secure, **real-time, context-aware access** to clinical data via natural language interfaces
- Partnered with **cross-functional engineering, compliance, and product teams** to assess **MCP** integration architectures; proposed a remote, stateless deployment model that strengthened security controls and simplified role-based access management for distinct clinical user groups

Projects

MakeItGreen | FastAPI, PostgreSQL, Docker, React, Caddy, DigitalOcean

[Link to Project](#)

- Built an **asynchronous code-execution system** using **FastAPI, PostgreSQL, and Docker**, separating the public Control Plane from a private execution worker with durable PostgreSQL-backed jobs, **transactional claims, expirations, and fencing tokens** to prevent stale workers from committing superseded results
- Designed a **split-host production architecture** on **DigitalOcean** isolating the public API from Docker host-control authority, secured with **private VPC networking, cloud firewall rules, PostgreSQL TLS**, and least-privilege database roles

Dispatch AI | FastAPI, WebSockets, Telnyx, Python AsyncIO, Amazon S3

[Link to Project](#)

- Built a **voice dispatch platform** using **FastAPI and Telnyx Call Control APIs** to answer and triage non-emergency and emergency-adjacent calls, reducing overload on 911 call centers while preserving human oversight
- Developed a **real-time voice AI agent** using **WebSockets, audio streaming, and speech-to-text** to hold structured conversations, capture incident details, and escalate calls to dispatchers based on safety thresholds

Leetcode Github Sync | Javascript, Chrome, GraphQL, HTML, CSS

[Link to Project](#)

- Built a **Chrome extension** using **GitHub's API** to automatically sync **LeetCode submissions** to a user's repository, growing to **1,000+ active users** and eliminating manual tracking of coding practice

Leadership and Activities

- HBCU Battle of the Brains Hackathon:** Led development of **WatchParty**, placing **2nd out of 40 schools**
- American Airlines Hackathon:** Built **Spark**, a financial app helping students manage and earn money, **placing 2nd**
- Google Developers Student Club:** **Founding member** and **Tech Lead**, teaching **DSA** for interview prep
- Propel Hackathon:** Built **Mesh**, uniting emergency units to coordinate seamlessly, **winning 1st place and \$18,000**
- Computer Science Club:** Served as **President**, organizing **12+ workshops/semester** and **raising engagement 50%**
